

AO Foundation Release Notice (V4R2M3)

Main additions to this version are;

1. A circumstance that causes the field attributes to be displayed in the field name column when selecting elements from the dictionary, is resolved.
2. If a dictionary element being changed or deleted is in use by any field in the D/B, a warning panel is displayed.
3. When selecting Foreign Keys for a referential constraint, AO was allowing the same field to be selected more than once. This is now corrected.
4. Changing a Cross-Check definition was causing an invalid date which has now been corrected.
5. The "Schema Type" and "Associated Dictionary" can no longer be changed when changing schema information.
6. An error occurring when a change to a table was not promoting the associated logicals, has now been corrected.
7. Changes to logicals not being recognized is now corrected.
8. Sundry other fixes, functional flow improvements and improvements to UI usability.
